## 2017 Statewide January Winter Storms

### Cal OES Coastal Region (Continued)

#### **River Forecast - The following rivers are forecast to meet or exceed Flood stage:**

##### Humboldt County:

- **Mad River at Arcata is forecast to crest at 22.1 feet the evening of 01/10/17.**
  - Potential Impacts: Significant flooding of portions of Mad River Beach Road and adjacent farm lands is likely. May cause water to flow across roads to Tyee City. High tides and strong onshore winds will aggravate flood impacts.
- **Eel River at Fernbridge is forecast to crest at 24.4 feet the morning of 01/11/17.**
  - Potential Impacts: Minor flooding of Highway 211 to Ferndale south of Fernbridge. Much of the Eel Delta may be flooded, including areas northwest of Loleta, the western portion of Cannibal Island Road. Flooding will be enhanced for longer duration events. A Special Action Advisory is being issued to all owners of livestock in areas adjacent to the Eel River and other low-lying areas. These animals are at risk due to river rises and appropriate action should be considered.
- **Van Duzen River at Bridgeville is forecast to crest at 18.8 feet the evening of 01/10/17.**
  - Potential Impacts: Flooding of Highway 36 near Grizzly Creek State Park and along River Bar Road in the Starvation Flats area. Water level at the State Park reaches the parking lot.

##### Mendocino County:

- **Navarro River at Navarro is forecast to crest at 34.3 feet the morning of 01/11/17.**
  - Potential Impacts: Significant flooding over the south bank approximately 1 mile east of Highway 1, and damage to property including 6 homes is possible. Expect closure of Highway 128. Motorists should use alternative routes.
- **Russian River at Hopland is forecast to crest at 25.0 feet the evening of 01/10/17.**
  - Potential Impacts: Severe bank erosion is likely with widespread flooding of farm land, buildings and low-lying homes in the Hopland, Ukiah, and Talmage areas. Many secondary roads will be flooded. This level of flooding caused 6100 acres to flood in February 1940.

##### Sonoma County:

- **Russian River at Guerneville is forecast to crest at 37.5 feet the evening of 01/11/17.**
  - Potential Impacts: Significant flooding can be expected throughout the lower portions of the Russian River. Mirable Park will be flooded. Mirabel Road is expected to flood at River Road. Rio Nido village is forecast to begin flooding. River Road east of Guerneville and River Boulevard east of Monte Rio are expected to flood.

# WEATHER OF CONCERN

## Weather of Concern

- Heavy rains and strong winds are expected today across coastal and valley areas. Localized flooding will be possible as well as widespread power outages; due to downed trees and powerlines. Wind gusts could reach 50 mph or greater at lower elevations and 65 mph or greater in the mountains.
- Strong winds and heavy snow could produce blizzard conditions across portions of the Sierra through Wednesday morning. 2-4 feet of snow can be expected above 6,000 feet through Wednesday afternoon.

# Key Points

- **Current weather system moving through is producing very strong winds along with heavy rain and snow. Strong gusty winds, nearly statewide, will be capable of downing trees & powerlines with increased threat of prolonged power outages. Significant impacts to travel expected.**
- **There is a renewed threat of rock and mud slides with additional precipitation today into Wednesday. Several rivers will peak again today into Wednesday with flooding (see slide #5).**
- **All rivers are expected to fall below flood stage by Wednesday. However, even after rivers crest, waters will continue to run high for several more days.**
- **Another much weaker weather system will move southeast through CA Thursday/Friday with beneficial rains to southern CA.**

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

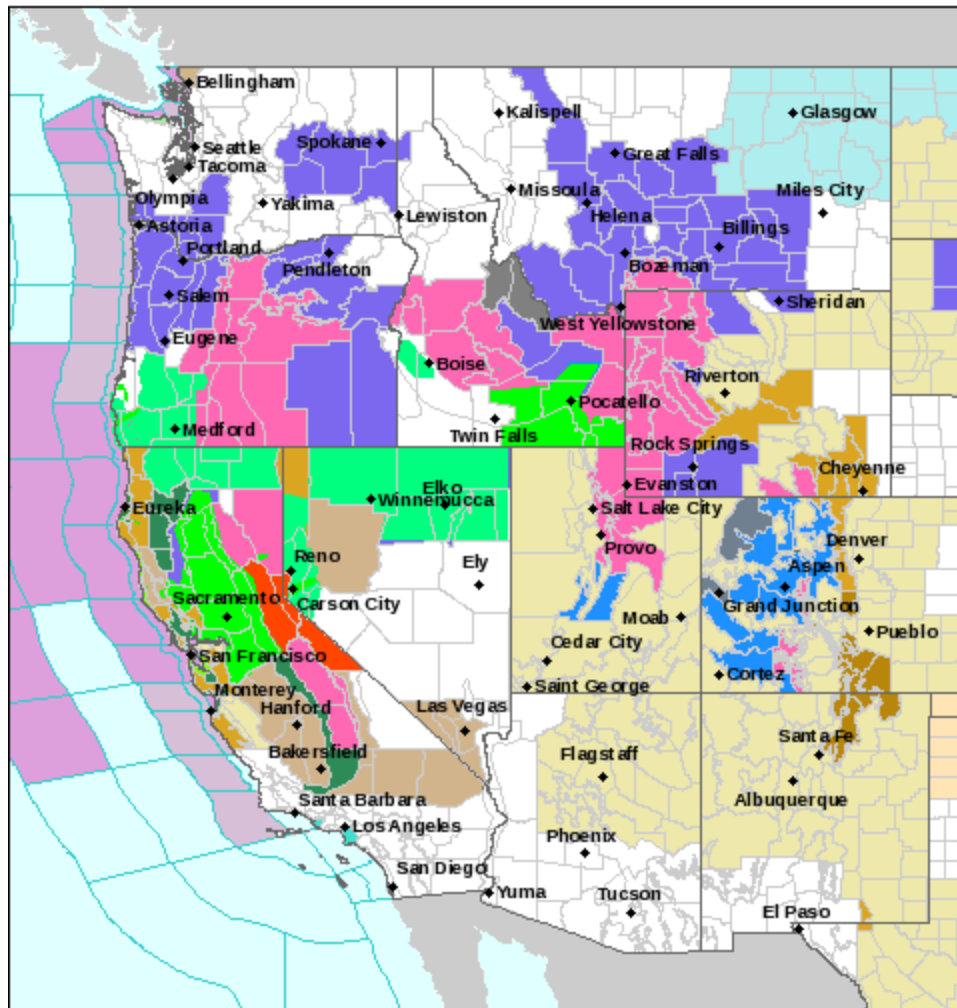

Very windy, wet weather will be over the region today. Gusty southerly winds will be on the increase with many areas having a period of sustained wind speeds of 15-30 mph and gusts 40-55 mph rather common. Water courses will run high and some flooding is anticipated. Saturated soils and the strong winds may well blow down some trees as well. Snow levels will be 3000-4000 feet in the north and 4500-5500 feet in the south. Precipitation will continue well into Thursday, although it will generally become more showery starting later tonight. Snow levels Wednesday will vary from 2000-3000 feet in the north and 3500-4500 feet in the south. Mountain travel may become a little easier Wednesday, but will still be challenging. The gusty southerly winds will continue over the eastern half of the region overnight, but they will be decreasing to mostly 10-20 mph with gusts to around 30 mph. Dry weather is expected Friday through Monday as high pressure moves over the region. Periods of overnight and morning valley fog may develop and persist, but some light northerly winds may also develop in the northern Sacramento Valley in particular and would keep that area somewhat fog-free. Another major, wet weather system may move into the region starting late next Tuesday and last a couple of days.

## **SOUTHERN CALIFORNIA**

A very wet, windy weather system will be over the region today with locally heavy rain or snow persisting for some time. Mountain travel will be difficult for much of the day, and snow levels will mostly be 3000-5000 feet in the north and 4500-5500 feet in the south. Southerly winds will be on the increase this morning and a period of sustained speeds of 15-30 mph and gusts 45-55 mph is expected for many areas. Wet weather will continue into Thursday, but it will become lighter and generally more showery overnight. Snow levels Wednesday will drop to around 2000-3000 feet in the north and 3500-4500 in the south. The gusty southerly winds will decrease quite a bit over the eastern half of the North Ops region tonight, but they will still be gusting to 25-30 mph in a lot of places into early Wednesday before decreasing during the day. High-running water courses will be common with areas of flooding expected over the next few days. The soft, saturated soils and strong wind will also create ideal conditions to topple trees. Friday through the weekend will be dry and warmer as high pressure moves through the region. Valley fog will become possible, but where it forms may well depend on whether some light northerly winds develop. Next week another significantly wet weather system may move into the region starting late next Tuesday.
